

To: All Customers

I would like to personally thank you for buying MAGNUM footwear.

We live in a very competitive world and know you have plenty of choice. By choosing our products you have supported an enthusiastic, very committed team of MAGNUM employees who want to make lightweight and comfortable footwear. When you put our boots on your feet, we want you to say: "Wow! This, I enjoy - comfortable, lightweight, strong, non slip, long lasting...etc" If you have any comments or questions, just write to me - I would like to hear from you.

Frank van Wezel - Chairman

Care Instructions

We hope that the following information will help you get the most out of your MAGNUM product.

Cleaning

Maintain your product by cleaning regularly. Dirt and mud should be brushed off once it has dried naturally. Wipe with a clean damp cloth if necessary.

Never wash in the washing machine. Immersion and exposure to detergents can attack the stitching and bonding agents within the product.

Drying

Dry slowly using natural air circulation at room temperature, do not subject the product to a direct heat source.

Paper can be used to stuff the product in the drying process to help absorb moisture and maintain the shape of the product.

Waterproof Treatment

If you have purchased a waterproof product, the leather must regularly be treated with waterproofing and conditioning sprays or creams. Used in wet conditions the leather will experience a gradual loss of its water resistant qualities, and if untreated the leather will slowly harden and crack.

Please note separate care information for ion-mask products. See in box leaflet or visit www.wetisdry.com

Linings

All linings used in MAGNUM products are made of comfortable breathable material that requires little or no maintenance. Foot moisture is absorbed and the drying process is quick due to the breathability nature of the linings

General Care

In some of our products we use antibacterial linings, but to further prevent foot odours and bacterial build, deodorising and antibacterial powders and sprays are available from most footwear retailers.

To retain the shape and durability of your MAGNUM products ensure the laces are undone before the product is removed.

PROTECTING THE PROTECTORS
